

# ADSORPTION DRYER

## HPR-DRY 400-3600 BP

(Heat regenerated adsorption dryer)

### DESCRIPTION

HPR-DRY 400-3600 BP adsorption dryers are designed for continuous separation of water vapour from compressed air thus lowering the dew point. HPR-Dry dryers have two columns that operate alternately. Adsorption takes place under pressure in the first column while the second column regenerates (heated ambient air for desorption + expanded dry compressed air purge for cooling). A dryer consists of two columns, filled with desiccant beads, a blower, heater, controller with an LCD display, valves, manometers, and a support construction. A proven and robust design enables efficient and reliable operation, fast installation and simple maintenance.

### DRYER RATING ACCORDING TO ISO8573-1

| Solid particles <sup>(1)</sup> | Water <sup>(1),(2)</sup> | Oil <sup>(1)</sup> |
|--------------------------------|--------------------------|--------------------|
| 2                              | 1-3                      | 1                  |

<sup>(1)</sup>Typical result based on standard configuration and nominal operating conditions

<sup>(2)</sup>Dependant on a specific design. Class 2 when operated at nominal operating conditions.

### TECHNICAL SPECIFICATIONS

|   |   |
|---|---|
| Operating pressure                        | 4 – 50 bar  |
| Operating temperature (inlet)             | 1,5°C to 42,5°C (for temperature >35°C apply correction factor)                       |
| Ambient temperature                       | 1,5°C to 50°C (check also blower suction conditions)                                  |
| Pressure dew point                        | -40°C (lower PDP on request)  |
| Voltage, Frequency                        | 400V, 50Hz  |
| Protection class (controller)             | IP 54   |
| Communication (on request)                | Optional: PROFIBUS, PROFINET  |
| Filter requirement (inlet)*               | Super fine coalescing; residual oil cont. <0,01mg/m3; 0,01µm                          |
| Filter requirement (outlet)*              | Dust filter; 1µm  |
| Column insulation                         | OPTIONAL (Required for ambient temp. <10°C)   |
| Valve position switches                   | OPTIONAL  |
| Communications module (PROFIBUS/PROFINET) | OPTIONAL  |
| <b>DRYER TYPES</b>                        | <b>BP</b>   |
| Desorption                                | Blower ambient air  |
| Cooling                                   | Purge air (expanded dry compressed air)   |
| Blower suction conditions max.            | Max 80% rh @ 35°C / Max 35%rh @ 50°C  |
| Compressed air losses**                   | Approx. 2-3% (average at nom. cond.)<br>Approx. 10-15% (during cooling at nom. cond.) |

\* Filters are included as standard but not mounted on the dryer

\*\*A small quantity of compressed air is used to re-pressurise the vessels, to operate the valves and to measure dew point

### MATERIALS

|  |  |
|--|--|
| Columns, construction, support           | Steel                                      |
| Column inner protection                  | /  |
| Column and construction outer protection | Epoxy painted                              |
| Desiccant support screen                 | Stainless steel                            |
| Valves                                   | Brass, aluminium, steel, stainless steel   |
| Seals                                    | NBR, FKM                                   |
| Fittings, Screws, plugs                  | INOX, brass, steel (zinc plated)           |
| Lubricant                                | Shell cassida grease RLS 2                 |
| Outside protection                       | Powder paint coated (Epoxy-polyester base) |
| Desiccant                                | Silica gel                                 |

<sup>(3)</sup>Refers to 1bar(a) and 20°C at 50 bar operating pressure , inlet temperature 35°C and pressure dew point at outlet -40°C

<sup>(5)</sup>Refers to dryer inlet and outlet connection without filters.

<sup>(6)</sup>Volume per vessel

## CORRECTION FACTORS

To calculate the correct capacity of a given dryer based on actual operating conditions, multiply the nominal flow capacity by the appropriate correction factor(s).

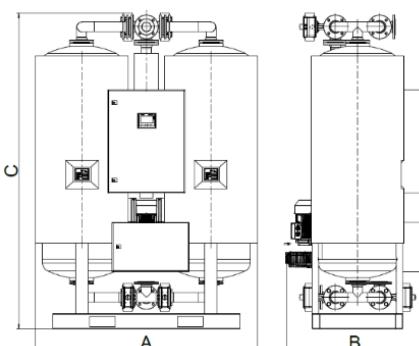

$$\text{Corrected capacity} = \text{Nominal inlet flow capacity} \times c_{OP} \times c_{OT}$$

## OPERATING PRESSURE

## MAINTENANCE

For maintenance, please follow the operating manual. Check the dryer operation weekly.
