

COMPRESSED AIR TREATMENT

Alternative Filter Elements

National Filters stocks a large range of alternative inline filter elements that suit most major original equipment manufacturers brands available in Australasia and meet the requirements of ISO 8573-1. Designed to fit like the original manufacturers' equipment, our competitive range of Omega Air alternative filter elements deliver performance that meets and often exceeds that of the OEM's elements. Pleated filter media provides significantly larger surface area than simple wrapped media, ensuring lower pressure drop and improved performance. The result is efficient, clean air, which is crucial in today's energy conscience world.
